Education

The University of Texas at Arlington

Bachelor of Science in Computer Science

- GPA: 3.72

May 2027

Arlington, TX

Relevant Coursework

Algorithms & Data Structures, Operating Systems, Software Engineering, Artificial Intelligence, Machine Learning, Neural Networks & Deep Learning, Cloud Computing, Software Testing & Maintenance, Software Design Patterns, Secure Programming, Computer Networks, Database Systems

Experience

Amazon – Process Guide | *Warehouse Systems, Data Analysis, Process Optimization*

- Utilized Amazon warehouse management and operational software tools to monitor workflow, track inventory movement, analyze productivity metrics, and support daily fulfillment operations.
- Monitored real-time operational data and system dashboards to identify workflow bottlenecks, troubleshoot process issues, and coordinate corrective actions with associates and leadership.
- Supported process optimization by analyzing performance metrics, maintaining accurate system records, and using data-driven insights to improve productivity, quality, and operational efficiency.

Projects

AI Chatbot – Assistance Chatbot | *Java, Maven, JSON*

- Developed a Java-based console chatbot that delivers career guidance on resumes, interviews, internships, and job applications through keyword-based conversation handling.
- Designed a modular architecture using Java Collections and JSON-configured responses, enabling scalable and maintainable conversation management.
- Built and managed the project using Maven while applying object-oriented programming principles and clean software design practices.

ResearchIQ – AI Research Management Platform | *Java, Agile, Git, Senior Design*

- Collaborated in a 5-member Agile team to develop an AI-powered research management platform, implementing and validating core features including authentication, project management, and user dashboards.
- Designed and executed functional and integration tests, identified defects, and verified feature implementations to improve software quality and reliability.
- Participated in sprint planning, backlog refinement, code reviews, and sprint demonstrations while producing technical documentation and sprint deliverables.

MediTrack – Healthcare Appointment & Billing System | *Python, PyTest, SQLite*

- Developed 100+ automated test cases using PyTest to validate patient registration, appointment scheduling, billing, and insurance workflows.
- Applied black-box, white-box, integration, system, and security testing techniques, improving software reliability through comprehensive test coverage and defect detection.
- Created Requirements Traceability Matrices (RTMs), pairwise test suites, and Coverage.py reports to verify requirements compliance and code quality.

Technical Skills

Languages: Java, Python, C++, SQL, HTML/CSS

Development: OOP, Maven, JSON, XML, Android SDK, Google Maps API

Testing: PyTest, JUnit, Coverage.py, Black-Box, White-Box, Functional, Integration, System, Security, BVA, Equivalence Partitioning, Decision Tables, State Transition, Pairwise Testing, RTM

Databases: SQLite

Software Engineering: Data Structures & Algorithms, Agile Scrum, SDLC, Requirements Analysis, Code Reviews

AI/ML: Reinforcement Learning, SVM, Logistic Regression, Naive Bayes, Neural Networks

Tools: Git, GitHub, IntelliJ IDEA, AWS, VS Code, Android Studio, Jupyter Notebook, Google

Certifications & Achievements

Phi Theta Kappa (PTK) Certification – Spring 2025

Freshman Distinction Roll – Spring 2026, The University of Texas at Arlington (Awarded for earning 3.5 or higher semester GPA)
